FOREWORD

The contents of this volume appeared first as separate preprints for use in the respective national parks. For this reason, and also because several indexes were in process simultaneously, it was impossible to page the volume continuously. The indexing was done by numerous workers -- a circumstance which may account for some inconsistencies and variation in choice of subject headings.

Moreover, the work was done in part indirectly from the annotated card catalogue of "Nature Notes" which had previously been made for the Division of Public Relations at National Park Service headquarters, Washington, D.C. The indexers were therefore largely dependent upon the accuracy and judgment of the annotators in assigning subject headings.

A word about the arrangement of the index may be helpful to its users. Emphasis throughout is on the subject aspect, although an attempt was made to list every author whose identity was known. The only exceptions in either case were trivia such as holiday greetings or brief announcements of only passing interest.

Personal names used as subjects are distinguished from authors by having the Christian names spelled out. In some cases it was necessary, in order to reduce the bulk of the assembled volume, to omit contributors' names in the citation under subject headings. They appear, however, in the usual fullness as author entries.

The compiler has not attempted any systematic classification of flora and fauna, although such topics as Animals, Geology, and others have been loosely grouped together for convenience. When there were only a few references to a subject, they have been placed without differentiation in the general alphabet. Common names have been preferred to scientific, even when the latter form was used in the original article.

The "Nature Notes" of Grand Teton and Shenandoah national parks, having originated in 1935 and 1936 respectively, are not represented because of their slight extent.

Grateful acknowledgment is made to the Works Progress Administration, which furnished labor and part of the materials for this undertaking, and to the Civilian Conservation Corps, which supplied a typist to cut a considerable portion of the stencils.
